

## Quick Start Guide

This Quick Start Guide is intended to be used by people who have experience with the phpCart.

1. Download the latest version of phpCart from our [Downloads web page](#)
2. Unpack the zip file locally or decide to unpack it on your server.
3. Create a new directory on your server and FTP the phpCart files to the directory.
4. Create your license file and FTP it to the cart directory.  
If you have purchased a license to phpCart, create your license file here:  
<http://phpcart.net/phplicenser/login.php>  
If you have not yet purchased phpCart, create a demo license here:  
<http://phpcart.net/phplicenser/demo/demo.php>
5. On Linux systems:
  - a. Set the read and write access to 777 on the **sessions** directory and the **orders** directory.
  - b. You must also set write access to the following files in the **admin** folder:
    - i. admin\_1.php
    - ii. configuration\_1.php
    - iii. coupon\_1.php
    - iv. payment\_1.php
    - v. processor\_1.php
    - vi. regions\_1.php
    - vii. countries\_1.php
6. Using your browser, navigate to the Admin Directory:  
[http://www.your\\_domain.com/your\\_cart\\_directory/admin/](http://www.your_domain.com/your_cart_directory/admin/)
7. Log in using these credentials:
  - a. Login Username: admin
  - b. Password: password
8. Select the Set Password option and update the admin password to secure your cart.
9. Select the Cart Configuration and set your cart parameters.
10. Select Gateway Settings and choose the Gateways that you will use.
11. Run an initial test on the Cart using the prototype templates to ensure that it's working.
12. That's it!!!
